## Knowledge Objects

- - A user-defined entity that enriches the existing data in the Splunk platform.
- You can use knowledge objects to get specific information about your data.
- When you create a knowledge object, you can keep it private or you can share it with other users.

knowledge objects examples -

- saved searches,
- event types,
- tags,
- field extractions,
- lookups,
- reports,
- alerts,
- data models,
- workflow actions, and
- fields.

Splunk Search Tutorials (sample data)

There are five key steps to enabling field lookups:

1. Upload the lookup file
2. Share the uploaded file with the applications
3. Create a lookup definition
4. Share the lookup definition with the applications
5. Optional. Make the lookup definition automatic
